

Anton Patrai

Head of Growth · B2B SaaS

Riga, Latvia · patrai.anton@gmail.com · linkedin.com/in/anton-patrai · github.com/patraianton

SUMMARY

Nine years in B2B SaaS growth, owning the full commercial function: SEO, content and partnerships, lifecycle and retention, paid ads, product analytics, GTM. At TimelinesAI I built the growth function from zero in 2022 and still run it hands-on. Over the past year I've added an always-on agent fleet that amplifies the same channels. It runs in herdr on my own multi-machine infrastructure, with internal tools I built to manage it (github.com/patraianton).

EXPERIENCE

TimelinesAI — Head of Growth

Apr 2022 – Present · Remote

A B2B SaaS that connects WhatsApp to companies' CRM systems, sold by self-serve subscription to SMB teams in North America, Europe and LATAM.

- **Built the growth function from zero.** Joined a five-person team with ~200 paying customers as the first dedicated growth hire; today ~2,700 paying customers and ~35 people, with a marketing team of three. I own both strategy and execution.
- **AI across every channel:** built the processes that now run on AI in SEO and content, lifecycle and retention, analytics and outbound, trained the team on them and rolled them out, operated by the team or fully autonomous. Underneath are cloud agents on VPS that work with the team in Slack and Linear, wired into 25+ production systems from PostHog and Stripe to the ad platforms, with cost and unit economics tracked per pipeline.
- **SEO and content:** I built an AI content-production workflow that draws on internal data (support chats, sales meetings, product analytics) and feeds organic acquisition and the customer lifecycle. The articles are written for Google search and for AI assistants alike.
- **Company website, owned end to end:** ran our WordPress site of 1,000+ pages in 10 languages on Weglot, then built its replacement myself on Sanity and Next.js, with no developers, and run it today.
- **Outbound rebuilt entirely on AI** at a fraction of what the channel cost when contractors ran it. When the outbound manager left, I took over the whole channel, 400+ mailboxes and the lead pipeline, and moved the work onto agents with a human approval gate on every send.
- **Lifecycle and retention:** onboarding and activation flows on PostHog and Customer.io. I own the anti-churn process: trial-to-paid, dunning and cancel flows, churn tracked by cancellation reason.
- **Every dollar of go-to-market spend measured monthly against new customers:** acquisition cost held under 1/6 of lifetime value. Paid ads on Google, Meta and LinkedIn are part of that spend.
- **Partner programme from zero to ~15% of revenue.** Turned CRM platforms from potential competitors into partners: co-marketing plus our integrations in the HubSpot, Salesforce, Pipedrive, Zoho and Bitrix24 marketplaces.
- **Integrations on our own SDK:** I pushed for an internal integration SDK, then built the Bitrix24 integration on it myself with AI tools, took it through marketplace review and maintain it today. It became the boilerplate for the dozens of AI-built integrations we shipped after it.

FlyHelp — Co-Founder

Feb 2017 – Feb 2022 · Ukraine

A legaltech service that won compensation for passengers on delayed and cancelled flights (the AirHelp model).

- Bootstrapped it from zero to 1,500+ monthly clients with no outside funding; ran a 15-person remote team plus agencies, B2B partners and legal contractors across 23 jurisdictions.

PERSONAL PROJECTS

- **mathlinguo.com** — an app I built for my son, a young mathematician competing in a non-native language: 460+ real olympiad problems with instant translation and hints, so the language stops being the obstacle.

SKILLS

Growth / GTM: customer acquisition · budget, CAC payback and LTV · lifecycle and retention · SEO, GEO and content · partner and affiliate programmes · outbound · paid ads · product analytics

AI, daily: Claude Code · Codex · Grok · herdr · cloud agents (Hermes, OpenClaw): setup and management · operator training · internal tools I built for my agent workflow (github.com/patraianton)

Stack: WordPress · Sanity · Next.js · GitHub · PostgreSQL · Customer.io · PostHog · GA4 / Search Console · Ahrefs · Google, Meta and LinkedIn Ads · Apollo · SmartLead / HeyReach · n8n · Linear

EDUCATION

Rotterdam School of Management, Erasmus University — BSc, International Business Administration

Languages: English — fluent
